

PR-1-FGB

product description

The model PR-1-FGB is designed for an inverted T-bar application. An extruded aluminum outer frame retaining the removable face is utilized for cleaning after installation. A series of spring clips which are totally concealed retain the face.

This model is an economical and versatile unit designed for a 24" x 24" T-bar system. The back is made of

rigid fiberglass that is pre-scored to accommodate 5" to 16" diameter flexible duct. The interior of the rigid fiberglass is black.

The 1" rigid fiberglass back has excellent noise absorption and insulating characteristics. The face is of .032" aluminum to allow for a rust-free installation.
